Subject: Microsoft Settlement

Hello,

I am writing because I am very concerned about the current Microsoft settlement. I find it to be wholly inadequate and does very little to curb Microsoft's continued illegal use of its monopoly power. There are many problems with this settlement. The definition of API is too narrow. Many of the other proposed items are so restricted that they won't even apply to future versions of Windows based on Microsoft's already stated intent.

I urge that this proposed settlement be rejected and something far stronger be put in place.

Thanks for your time,
